

Introduction to the National Artificial Intelligence Institute (NAII) Cyberseminar

Gil Alterovitz, PhD.
Director, NAII

VA

National Artificial Intelligence Institute

AI is not perfect

Poll: Which color is darker?

- A
- B
- Same

Neither is “Natural Intelligence”

This is a special time for AI...

American AI Initiative and National AI R&D Strategic Plan

EXECUTIVE ORDERS

Executive Order on Maintaining American Leadership in Artificial Intelligence

— INFRASTRUCTURE & TECHNOLOGY | Issued on: February 11, 2019

Why AI at VA?

9.1 million +
patients, making VA
the largest integrated
healthcare system in
the United States

800 thousand
genomic
donations tied
to medical
records, the
largest such
database in the
US

1200 +
medical facilities
across all 50 states
and US territories

120 thousand +
doctors and nurses in VA,
with nearly 75% of all US
doctors trained in VA
hospitals

2.18 million +
telehealth
episodes of
care per year

1 billion +
Images per year
in electronic
health record

Our Mission and Charter

Establish the Department of Veterans Affairs as the preeminent organization for research, development, and training of Artificial Intelligence with impact on a global scale, ensuring the health and well-being of our Veterans.

Veteran Engagement Board

- We are looking for volunteers to:
 - Engage in collaborative discussions to aid in the understanding the assumptions and perceptions of Artificial Intelligence research and development.
 - Assist in the development of research and development pilots related to improving the health and well-being of Veterans through Artificial Intelligence.
 - Assist in the dissemination of research and best practices
- If you are an interested Veteran, please contact george.chewning@va.gov

Pilots to test what flies

- This year, we are learning about the challenges we face for AI at VA.
- We aim to rapidly prototype AI R&D in Veteran health and well-being to show what's possible.

AI Tech Sprints

- Time-limited engagements designed to foster collaboration with potential industry, academic and non-profit partners by iteratively designing an AI-enabled tool that leverages federal data to address a need for Veterans
- Designs and leverages Government Innovation Award-winning framework for empowering an AI-able Ecosystem through voluntary incentives

National AI Research Institutes launches with \$200M in grants for societal benefit

NSF, USDA, DHS, VA, DOT PARTNER TO FOSTER AI RESEARCH

The National Science Foundation (NSF) has announced a program that aims to pursue artificial intelligence research projects with partnering institutes. NSF said that it partnered with the departments of Agriculture, Homeland Security, Veterans Affairs and Transportation to solicit for work under the National AI Research Institutes program.

The joint program would engage with research institutes on two tracks. The first, known as the planning track, would cover study areas that involve applications needed by NSF and its partners. The second, known as the institute track, would focus on projects that tackle AI trustworthiness, machine learning foundations and AI applications in agriculture, food, education, molecular synthesis, manufacturing and physics.

VA and DeepMind

- Predict Acute Kidney Injury (AKI) 48 hours in advance
- Early warning enables time to take preemptive action
- Helps prevent kidney injury

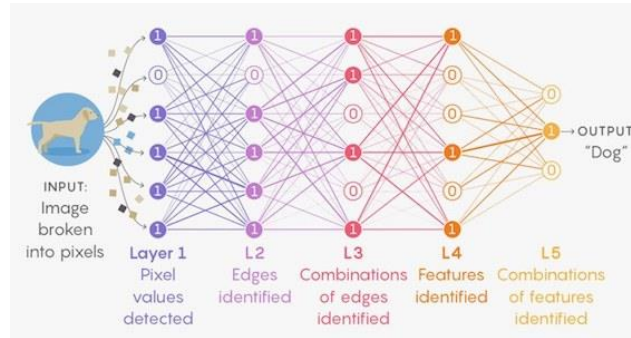

Enabling VA Leadership for AI Use Cases by Building AI R&D Capacity

1. Deep Learning
2. Trustworthy AI
3. Privacy Preserving AI
4. Explainable AI
5. Multiscale AI Analysis

Delivering on Veteran use cases by building AI R&D capabilities

1. Deep Learning

- Artificial neural network architectures with specialized architectures (e.g., multiple hidden layers).
- Example: useful for learning from large, noisy, and related pieces of information including: imaging, language processing, etc.

<https://www.wired.com/story/new-theory-deep-learning/>

2. Trustworthy AI

- Definition (per EU framework):
 - Lawful - respecting all applicable laws and regulations
 - Ethical - respecting ethical principles and values
 - Robust - both from a technical perspective while taking into account its social environment
- Example: Trustworthy AI methods useful in establishing and removing biases (e.g. subpopulations) in AI-based analysis

<https://hub.packtpub.com/the-eu-commission-introduces-guidelines-for-achieving-a-trustworthy-ai/>

https://ec.europa.eu/newsroom/dae/document.cfm?doc_id=60419

3. Privacy-Preserving AI

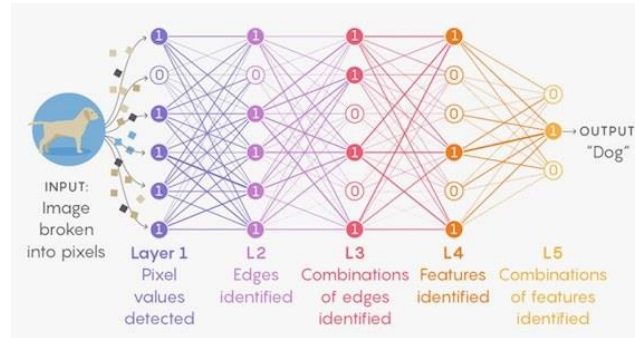

- AI analysis that can obtain results without exposing the underlying data.
- Example: Homomorphic encryption enables AI-based results to be obtained without exposing underlying data at cost of order of magnitude or more of computation time.

1. **S o u r c e**
I n f o r m a t i o n / D a t a b a s e
P r i v a c y
2. **A I M o d e l I n p u t**
P r i v a c y
3. **A I M o d e l P r i v a c y**
4. **A I M o d e l O u t p u t**
P r i v a c y
5. **D e s t i n a t i o n**
I n f o r m a t i o n / D a t a b a s e
P r i v a c y

4. Explainable AI

- AI approaches that seek to enable the capability to look inside a model's "black box" to understand and interpret how the model came up with a particular solution.
- Example: Deep learning is traditionally not thought of as explainable AI, but new approaches are beginning to enable some understanding of the underlying processes.

5. Multiscale AI Analysis

- AI that can efficiently analyze at systems at different scales.
- Example: AI methods that can integrate deep learning models across cancer images from MRI scans, CT, histology, and other imaging modalities. Another example is time series: using AI to make predictions for different time scales.

Poll: Which of these may be of further interest to you or someone you work with?

(Check all that apply)

- Deep Learning
- Trustworthy AI
- Privacy Preserving AI
- Explainable AI
- Multiscale AI Analysis
- None

Building AI R&D Capacity

Identify challenges and iterate on building AI R&D capacity, processes, and policy at VA, especially ones that can gain from inter-office collaborations.

| Pilot topic | AI-able data with | AI Impact | Policy areas |
|---|--------------------------|----------------------|--------------------------|
| Brain Health | Apple and/or Fitbit | Personalize + Triage | Informatics-as-a-Service |
| Connected Health | Devices + Clinical data | Risk Evaluation | Compute color of money |
| In Silico Testing into Therapeutics Repositioning | Patients + Clinical data | Targeted Trials | Hiring authority |

Facilitating Interdisciplinary AI R&D Capacity and Policy Implications

- How can we work across VA, universities, and other organizations to build AI R&D capacity?
- What policies and processes can be changed to facilitate?
- Useful to explore means to leverage other data/AI expertise in such cases and capture lessons learned.
- Example: NAII affiliate and now core member Christos Makridis, PhD worked with a computer scientist at Stanford, David Zhao and Gallup to quantify the role of socio-economic factors on physical well-being among veterans.

Together building AI at VA

Leveraging VA information to advance AI across VA medical centers by overcoming barriers in policy and processes to provide best-in-class care to our Nation's Veterans.

A sample of offices working on AI at VA:

Join the AI Community

- AI@VA
- Bringing together people and labs around cutting edge AI for Veteran health and well-being.
- Mailing list, surveys, and website to spotlight leading edge AI efforts across VA offices and centers
- Join now! research.va.gov/naii/join.cfm

Poll: Which of the following describes you?

- Interested in cutting-edge AI, but never used AI
- Interested in cutting-edge AI, and have leveraged some AI in your work in the past
- Interested in cutting-edge AI, and currently actively working on and leveraging cutting-edge AI
- None of the above

Prospective Members

- Interested in cutting-edge AI
- Not necessarily active in projects

- Interested in cutting-edge AI
- Actively working on AI projects

- Interested in cutting-edge AI
- Researchers are working on AI
- Want to work on national/policy issues

NAll Member Model

| Benefits | Community | Affiliate | Associate | Core |
|--|-----------|-----------|-----------|------|
| First access to VA AI news & highlights | | | | |
| Officially affiliated with NAll in publications | | | | |
| Listed on NAll website as an affiliate | | | | |
