Military Population Health

Lt Col Patricia Rohrbeck, DrPH, MPH, MS
Director

Military Population Health Directorate
Naval Health Research Center
San Diego, CA
NHRC Core Research Areas

Operational Readiness and Health
• We optimize health and performance

Military Population Health
• We protect and maintain health

Operational Infectious Diseases
• We contribute to force health protection by identifying critical pathogen threats
Military Population Health Mission
Protect and maintain health

READINESS

EXCELLENCE
- PROVIDE INCREASED UNDERSTANDING OF THE LONG-TERM IMPACT OF MILITARY SERVICE
- PROVIDE SOLUTIONS THAT MITIGATE PSYCHOLOGICAL HEALTH IMPACT ON READINESS, RETENTION, & RESILIENCE

SPONSORS/CUSTOMERS
- USUHS

HEALTH & BEHAVIORAL SCIENCES
**Military Population Health (MPH) Directorate Structure**

**Departments**

**Deployment Health Research (DHR):** Provided increased understanding of the long-term impact of military service on members and their families

**Health and Behavioral Health (HBS):** Enhance the psychological and behavioral health of military personnel and their families, thereby increasing their readiness, resilience, and health through (1) empirical research, (2) developing and testing interventions

**Manning**

- **Military:** One Navy; One Air Force; One Army
- **GS:** Five civilian vacancies

**Leadership**

- **Director:** Lt Col Patricia Rohrbeck (Research Epidemiologist)
- **HBS Department Head:** Dr. Cynthia Thomsen (Research Psychologist)
- **DHR Department Head:** MAJ Keyia Carlton (Research Psychologist)

**Metrics**

- FY 20 Funding $15M
- >120 abstracts, posters, manuscripts, presentations, technical reports in FY20
Deployment Health Research

Disclaimer

**Disclaimer:** I am a military service member or employee of the U.S. Government. This work was prepared as part of my official duties. Title 17, U.S.C. §105 provides that copyright protection under this title is not available for any work of the U.S. Government. Title 17, U.S.C. §101 defines a U.S. Government work as work prepared by a military service member or employee of the U.S. Government as part of that person’s official duties. This work was supported by the Military Operational Medicine Research Program, the Defense Health Program, and the Department of Veterans Affairs under work unit no. 60002. The views expressed in this article are those of the authors and do not necessarily reflect the official policy or position of the Department of the Navy, Department of Defense, nor the U.S. Government.

The study protocol was approved by the Naval Health Research Center Institutional Review Board in compliance with all applicable Federal regulations governing the protection of human subjects. Research data were derived from an approved Naval Health Research Center Institutional Review Board protocol, number NHRC.2000.0007.
Outline

• Millennium Cohort Study overview
• Millennium Cohort Study Service women and Veteran profile
• Women-specific survey items
• Recent study findings focused on service women
• Current and future research directions
Millennium Cohort Study Overview
Study Origin

- 1998: Department of Defense (DoD), Armed Forces Epidemiological Board, Department of Veterans Affairs (VA), and Institute of Medicine recommended a coordinated prospective longitudinal cohort study of service members
  - Newly available DoD surveillance and electronic health care data

  - Sect. 743: Establish “a longitudinal study to evaluate data on the health conditions of members of the armed forces upon their return from deployment”
  - NHRC designated as the DoD Center for Deployment Health Research
# Study Objective and Methodology

Prospectively determine the impacts of military deployments, experiences, and exposures on the long-term health of Service members and Veterans

## Multiple-panel cohort study of all Services and Components (n=201,620)

Medical Encounter Data (Active Duty)

- Military Health System Data Repository (MDR)
  - Active duty service women, while still in service
  - Inpatient and outpatient ICD-9, ICD-10, CPT codes, etc.
  - All care paid for by TRICARE, both at MTF’s and private facilities

- Access to DoD Birth and Infant Health Research Program
  - DoD beneficiary births, with specific focus on maternal, pregnancy, and infant outcomes into early childhood
Medical Encounter Data (Veterans)

- Veterans Health Administration medical records
- Data Use Agreement established in 2018
- Databases
  - Already linked: mortality, outpatient, inpatient, service connected disability
  - Not yet linked: prescription drugs, vitals, labs
- Among all (male and female) Millennium Cohort Study participants who have separated, >80% have at least one medical encounter recorded in the VA
Recent Study Findings Focused on Service Women
## Risk Factors for Miscarriage and Perceived Impaired Fecundity

| Study population | • Service women enrolled in 2001 or 2004  
|                  | • 18-45 years old at time of enrollment |
| Follow-up period | • 2004-2006 (baseline) through 2007-2008 (follow-up) |
| Primary exposures| • Deployment status (not deployed, deployed without combat, deployed with combat)  
|                  | • Cumulative days deployed (0, 1-180, >180 days)  
|                  | • Life stressors (low/mild, moderate/major) (2001 enrollees only) |
| Primary outcomes | • Surveys  
|                  | • Miscarriage  
|                  | • Perceived impaired fecundity  
|                  | • Medical records (active duty only)  
|                  | • Miscarriage  
|                  | • Infertility |
| Citation         | Ippolito AC, Seelig AD, Powell TM, Conlin AMS, Crum-Cianflone NF, Lemus H, Sevick CS, LeardMann CA. **Risk Factors Associated with Miscarriage and Impaired Fecundity Among United States Servicewomen During the Recent Conflicts in Iraq and Afghanistan.** Women's Health Issues; 2017 Feb;27(3):356-365. |
## Miscarriage Risk Factors: Results

Among 3,366 service women reported a pregnancy during follow-up period, 31% reported having a miscarriage

### Key results

- No association between self-reported miscarriage and deployment with or without combat experience
  - No association with length of deployment
  - Similar results observed for miscarriages ascertained from medical records among active duty women
- 2001 enrollees: Miscarriage risk appeared to be elevated among women reporting moderate/high vs. mild/low stressors (adjusted odds ratio =1.67; 95% CI: 0.99–2.80)
Impaired Fecundity Risk Factors: Results

Among 11,183 service women, 11% reported impaired fecundity

Key results
• No association between self-reported miscarriage and deployment with or without combat experience
  • No association with length of deployment
  • Similar results observed for infertility ascertained from medical records among active duty women
• 2001 enrollees: No association with life stressors
## Maternal Depression

| Study population | • Service women enrolled in 2001 or 2004  
|                  | • Gave birth during active duty service |
| Follow-up period | • 2001 or 2004 (baseline), through 2008 (follow-up) |
| Primary exposure | • Deployment status (not deployed, deployed without combat, deployed with combat) assessed measured both before and after childbirth |
| Primary outcome  | • Maternal depression (PHQ, based on simple scoring where ≥10 indicated maternal depression) |
| Secondary analysis | • Among deployed active duty women, examined whether childbirth was associated with post-deployment depression |
Maternal Depression: Results

<table>
<thead>
<tr>
<th>Among 1,660 service women who gave birth on active duty between baseline enrollment and first follow-up surveys:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• 11% screened positive for maternal depression at the follow-up survey</td>
</tr>
<tr>
<td>• <strong>Before</strong> childbirth: 72% did not deploy, 12% deployed without combat, 16% deployed with combat</td>
</tr>
<tr>
<td>• <strong>After</strong> childbirth: 86% did not deploy, 6% deployed without combat, 8% deployed with combat</td>
</tr>
<tr>
<td>• Combat deployment <strong>after</strong> childbirth was associated with maternal depression (OR=2.01 95% CI=1.17-3.43)</td>
</tr>
<tr>
<td>• No association between deployment <strong>before</strong> childbirth and maternal depression</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Secondary analysis: Among 3,356 active duty deployed women, 20.1% experienced childbirth</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Among combat deployers, childbirth was not associated with depression</td>
</tr>
</tbody>
</table>

Risk of screening positive for depression appeared to be related to combat rather than childbirth-related experiences
Sexual Trauma

HOW DOES SEXUAL VIOLENCE IMPACT SERVICE WOMEN AND MEN?
Researchers from the Millennium Cohort Study surveyed men and women from all service branches, Active Duty, Reserve, and National Guard personnel and found that...

Women
...who indicated experiencing sexual assault were:
- 73% more likely to resume unhealthy alcohol use
- 2x as likely to have difficulties in work or daily activities
...who indicated experiencing sexual harassment were:
- 47% more likely to have been demoted

Research shows that sexual violence increases the risk of...

Men
...who indicated experiencing sexual assault were:
- 6x as likely to resume cigarette smoking

...who indicated experiencing sexual harassment were:
- 60% more likely to leave military service
- 76% more likely to indicate being disabled or unemployed post-service

*When compared to women who did not indicate sexual harassment or assault on the survey

www.millenniumcohort.org
Other Studies Focused on Service Women and/or Veterans

- Headache disorders
- Asthma
- PTSD and autoimmune diseases
- Gender differences in PTSD development
- HPV vaccination initiation and adherence
- Cervical cancer screening
- Weight change
- Obesity
Current and future research directions
Annual Report to Congress: Health of Service Women

• National Defense Authorization Act for FY 2020, Section 748:
  – “Submit to [Congress]...a report on findings of the Millennium Cohort Study relating to the gynecological and perinatal health of women members of the Armed Forces.”
  – Reports submitted annually through January 31, 2022
Annual Report to Congress: Health of Service Women

- **FY2020 Report**
  - Summarized published findings focused on women participants in the Millennium Cohort Study

- **FY2021 Report**
  - Reported prevalence of selected gynecologic, reproductive, and infant health outcomes
  - Utilized self-reported survey data as well as administrative data from MDR and BIHR
  - Focus on menstrual suppression
Data Linkage with VHA

- Represents efforts led by Dr. Ed Boyko (1999- )
- Data currently linked
  - Inpatient and outpatient encounters
  - Service-connected disability ratings
- Veteran focused research on this merged data must be conducted at NHRC by analysts working there
  - Several Veteran focused research projects are underway
  - Two grant applications have been submitted by VA investigators to study melanoma and Parkinson’s Disease risk factors
Future Plans as a Resource for VA Investigators

• Approval has been granted for transfer of Millennium Cohort data to VA CSP #505

• Plans are underway to make these data available for analysis within the VA firewall
  – Data will reside on VINCI
  – Data resource guide and dictionary are being developed
  – Information and instructions for access are now available on the INVESTD-R website and will be updated as needed
Millennium Cohort Study Surveys

• Use new (2019) survey items that are currently being collected
• 2023 Survey development
  – Veteran’s module
  – Women’s Health module
Current Projects Specific to Service Women

- Sexual health
- Mortality
- Musculoskeletal conditions and injuries (DHA Health Services Research Award)
Future Research Directions

• Potential future projects
  – Unplanned pregnancies and suicide risk
  – Pregnancy complications and CVD risk
  – Mental and physical health among women in combat occupations

• Veteran women’s health topics mentioned at the VA summit in January
  – Link between reproductive and mental health
  – Hysterectomies – possibly linked with fibroids, examine differences by race
  – Trauma-sensitive care
  – Contraception usage
  – Cardiovascular conditions during pregnancy and long term health outcomes

• Coordination of research agenda with BIHR, DHA Women and Infants Clinical Community (WICC), and VA Women’s Health Research Network
Dr. Sally Haskell
ALIGNMENT WITH WOMEN’S HEALTH GOALS

Goal 1
Women Veterans receive high quality, patient driven healthcare

Goal 2
Women Veterans receive care that is seamless, wholistic, and collaboratively delivered

Goal 3
Culture is transformed through employee accountability for women Veterans’ experience

Goal 4
VA is a national leader in women’s health
| Women’s life transition is fully supported | Identify the needs of women Veterans as a result of military service to include:
- Impacts on overall health
- Impacts on reproductive health
- Potential impacts on intergenerational health |
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>4.3.1</td>
<td>Assess and address gaps in service and/or risks to women Veterans during transition from active duty</td>
</tr>
<tr>
<td>4.3.2</td>
<td>Improve transition outcomes for women Veterans through expanded access to Enhanced Transition Assistance Program and other initiatives which identify risks and address women Veterans’ unique needs associated with first year of transition</td>
</tr>
<tr>
<td>4.3.3</td>
<td></td>
</tr>
<tr>
<td>4.3.4</td>
<td></td>
</tr>
</tbody>
</table>
• Mutual goal to understand the impact of military service on women’s health
• Unprecedented opportunity for VA researchers
• Data and analysis will assist VA with understanding treatment targets/ intervening early/developing policies/programs to target gender specific needs/improve long term health outcomes.
RESEARCH OPPORTUNITIES

• 80% have a medical encounter in VA
• Link survey to EHR data
• Opportunity for data on VA users/nonusers
• Validate previous VA research with larger scale data
• Gender differences
• Address gaps—such as maternal infant outcome data
• Identify conditions, risks, exposures
• Track into VA care and outcomes
• Develop predictive algorithms
• Enrich understanding by comparing/contrasting previous VA research
• Cardiovascular Disease Risks
• Musculoskeletal
• Mental Health
• Maternal/reproductive health

</tr>
</tbody>
</table>
Headache Disorders: Results

Among 12,409 service women

• 7.8% reported new-onset migraine
• 16.5% reported new-onset recurrent severe headache
• 8.2% reported recent headaches (bothered a lot in the past 4 weeks)

• Compared with non-deployed women, combat deployers were more likely to report any new-onset headache disorder (odds ratio=1.84, 95% CI 1.55-2.18)
  • No association observed for those deployed with no combat experiences
  • Similar association observed for each of the separate new-onset headache outcomes
# New-Onset Asthma and Combat Deployment

| Study population | • Service women and men enrolled in 2001, 2004, or 2007  
|                  | • Active duty or Reserve/Guard |
| Follow-up period | • 2001, 2004, or 2007 (baseline), through 2013 (follow-up) |
| Primary exposure | • Deployment status (not deployed, deployed without combat, deployed with combat)  
|                  | • Deployment duration  
|                  | • Multiple deployments |
| Primary outcomes | • Self-reported asthma diagnosed in the last 3 years |
New-Onset Asthma and Combat Deployment: Results

Among 22,944 service women (58% active duty), 4.6% reported new-onset asthma.

Key results:
• Increased asthma risk associated with deployment with combat experience for both service women and men
  • Among deployers, no association between asthma risk and multiple deployments and deployment duration
• PTSD (positive screen) associated with asthma risk (rate ratio for women: 1.56, 95% CI: 1.30-1.88)
# Sexual Trauma and Unhealthy Behaviors

<table>

<td>Unhealthy alcohol use initiation</td>
</tr>
<tr>
<td></td>
<td>• Unhealthy alcohol use relapse</td>
</tr>
<tr>
<td></td>
<td>• Smoking relapse</td>
</tr>
</tbody>
</table>
### Sexual Trauma and Unhealthy Behaviors: Results

Among 4,816 service women with no history of unhealthy alcohol use
- 13.1% initiated unhealthy alcohol use
- 8.6% experienced sexual harassment
- 2.3% experienced sexual assault
- No observed association between prior sexual trauma and initiation of unhealthy alcohol use

Among 1,318 service women with prior remittent unhealthy alcohol use
- 35.5% relapsed to unhealthy alcohol use
- 11.2% experienced sexual harassment
- 3.6% experienced sexual assault
- Women who experienced sexual assault were more likely to relapse to unhealthy alcohol use than women who did not experience sexual assault (risk ratio=1.73; 95% CI: 1.06, 2.83)
  - No observed association with sexual harassment
# PTSD and Autoimmune Diseases

<table>

| Primary outcomes (from medical records) | • Rheumatoid arthritis  
  • Systemic lupus erythematosus  
  • Multiple sclerosis  
  • Inflammatory bowel disease |
| Citation                              | Bookwalter DB, Roenfeldt KA, LeardMann CA, Kong SY, Riddle MS, and Rull RP. Posttraumatic stress disorder and risk of selected autoimmune diseases among US military personnel. BMC Psychiatry (in press). |
PTSD and Autoimmune Diseases: Results

Among 35,112 active duty service women, 1.1% had been diagnosed with at least one of the autoimmune diseases of interest

- PTSD was associated with overall increased risk of autoimmune diseases of interest (hazard ratio = 1.7, 95% CI: 1.2-2.4)
- For specific conditions, PTSD was associated only with inflammatory bowel disease (hazard ratio = 3.2, 95% CI: 1.7-5.9)
# Gender Differences in PTSD Development

<table>
<thead>
<tr>
<th>Study population</th>
<th>• Service women and men enrolled in 2001 who completed the 2004 and 2007 follow-up surveys, screened negative for PTSD at baseline and deployed in support of the operations in Iraq and Afghanistan</th>
</tr>
</thead>
<tbody>
<tr>
<td>Follow-up period</td>
<td>• 2001 (baseline) through 2007 (follow-up)</td>
</tr>
<tr>
<td>Primary exposure</td>
<td>• Combat deployment (yes/no)</td>
</tr>
<tr>
<td>Primary outcomes</td>
<td>• New-onset self-reported PTSD using the PCL-C</td>
</tr>
</tbody>
</table>
## Gender Differences in PTSD Development: Results

<table>
<thead>
<tr>
<th>Description</th>
<th>Percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>There were 4,684 participants in this study (2,342 men and women)</td>
<td></td>
</tr>
<tr>
<td>• 6.7% of women developed PTSD</td>
<td></td>
</tr>
<tr>
<td>• 6.1% of men developed PTSD</td>
<td></td>
</tr>
<tr>
<td>No significant gender differences were observed among those experiencing</td>
<td></td>
</tr>
<tr>
<td>combat and developing PTSD</td>
<td></td>
</tr>
<tr>
<td>• Also no gender differences in the development of PTSD who reported no</td>
<td></td>
</tr>
<tr>
<td>combat experiences</td>
<td></td>
</tr>
</tbody>
</table>
## Sexual Assault Findings

*(Includes Reserve and National Guard)*

New-onset PTSD among combat deployers occurred in 22% of women who reported prior assault and 10% not reporting prior assault. New-onset PTSD symptoms were twice as likely among women who reported assault prior to deployment.

10.3% of women reported sexual assault or harassment at follow-up. Women who deployed with combat were twice as likely to report experiencing sexual harassment or experiencing both sexual harassment and assault compared with nondeployers.

10.5% of women reported sexual harassment and 2.9% sexual assault. Women reporting sexual harassment or assault were more likely to report poorer mental and physical health as well as difficulties in work/activities due to emotional health. Sexual harassment was associated with demotion.

## Mental Health Findings
*(Includes Reserve and National Guard)*

<table>
<thead>
<tr>
<th>Deployment Status</th>
<th>Mental Health Conditions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Deployed women with combat exposures</td>
<td>The highest onset of depression, followed by those not deployed and those deployed without combat exposures.</td>
</tr>
<tr>
<td>Women who were combat deployed</td>
<td>Reported higher stress, problem drinking, and a history of mental illness were at increased risk of later mental health conditions. In contrast, women in the Reserves or National Guard and those with higher education were at decreased risk of mental health conditions.</td>
</tr>
<tr>
<td>Compared to men</td>
<td>Women had higher incidence rates of anxiety/panic disorder, any mental disorder (i.e., PTSD, depression, panic/anxiety), and self-reported mental health-related medication use, and lower rates of binge drinking, problem drinking, cigarette smoking, and smokeless tobacco use.</td>
</tr>
</tbody>
</table>

---

- **Crum-Cianflone NF, et al.** *Mil Med.* 2016. PMID: 27244063
Weight Change Findings
(Includes Reserve and National Guard)

PTSD at baseline was associated with disordered eating behaviors at follow-up. The association between PTSD and weight change was mediated by disordered eating symptoms. PTSD was both directly and indirectly (through disordered eating) associated with weight change.

Deployed women reporting combat experiences were approximately twice as likely to report new-onset disordered eating compared with women who deployed but did not report combat experiences. These women were also twice as likely to lose 10% or more of their body weight.

# Sexual Health

</tr>
<tr>
<td></td>
<td>• Bothered by little or no sexual desire or pleasure during sex</td>
</tr>
<tr>
<td></td>
<td>• Bothered by pain or problems during sexual intercourse</td>
</tr>
<tr>
<td></td>
<td>• New-onset sexual dysfunction (ICD-9 codes, medical encounter data; Active Duty only)</td>
</tr>
</tbody>
</table>
Sexual Health: Results

Among 6,705 service women, 13.6% reported sexual function difficulties
• Associated with prior PTSD or depression (odds ratio =2.0; 95% CI: 1.6, 2.5)
• Observed associations of combat deployment and sexual assault with sexual health difficulties were mediated by PTSD

Among 5,619 active duty women, 4.7% had a medical encounter with an ICD code corresponding to new-onset sexual dysfunction
• No observed associations with prior PTSD or depression, combat deployment, or sexual assault
• PTSD significantly mediated the impact of recent combat deployment on sexual dysfunction
Musculoskeletal Conditions and Injuries in the MHS

• Newly funded DHA Health Services Research project:
  – Burden of disease of musculoskeletal conditions and associated healthcare utilization patterns in Active Duty Millennium Cohort Members and Military Health System populations (PI: Lt Col Patricia Rohrbeck)

• Specific aims
  – Characterize incidence and prevalence of musculoskeletal condition groupings and assess healthcare utilization patterns in the Millennium Cohort Study
  – Construct a functional health predictive model using Millennium Cohort Study data from for musculoskeletal conditions in the MHS

Veterans Health Administration
Women’s Health Services

Millennium Cohort/VA Collaboration
January 11, 2021

Sally G. Haskell, MD, MS
Deputy Chief Officer for Clinical Operations
Director of Comprehensive Women’s Health,
Women’s Health Services (WHS)
Veterans Health Administration (VHA)
Department of Veteran Affairs (VA)
ALIGNMENT WITH WOMEN’S HEALTH GOALS

Goal 1: Women Veterans receive high quality, patient driven healthcare

Goal 2: Women Veterans receive care that is seamless, wholistic, and collaboratively delivered

Goal 3: Culture is transformed through employee accountability for women Veterans’ experience

Goal 4: VA is a national leader in women’s health
<table>
<thead>
<tr>
<th>Women’s life transition is fully supported</th>
</tr>
</thead>
<tbody>
<tr>
<td>4.3.1 Identify the needs of women Veterans as a result of military service to include:</td>
</tr>
<tr>
<td>• Impacts on overall health</td>
</tr>
<tr>
<td>• Impacts on reproductive health</td>
</tr>
<tr>
<td>• Potential impacts on intergenerational health</td>
</tr>
<tr>
<td>4.3.2 Assess and address gaps in service and/or risks to women Veterans during transition from active duty</td>
</tr>
<tr>
<td>4.3.3 Improve transition outcomes for women Veterans through expanded access to Enhanced Transition Assistance Program and other initiatives which identify risks and address women Veterans’ unique needs associated with first year of transition</td>
</tr>
<tr>
<td>4.3.4 Anticipate women Veterans’ evolving health needs throughout their lives</td>
</tr>
</tbody>
</table>
• Mutual goal to understand the impact of military service on women’s health
• Unprecedented opportunity for VA researchers
• Data and analysis will assist VA with understanding treatment targets/ intervening early/developing policies/programs to target gender specific needs/improve long term health outcomes.
• 80% have a medical encounter in VA
• Link survey to EHR data
• Opportunity for data on VA users/nonusers
• Validate previous VA research with larger scale data
• Gender differences
• Address gaps—such as maternal infant outcome data
RESEARCH OPPORTUNITIES

• Identify conditions, risks, exposures
• Track into VA care and outcomes
• Develop predictive algorithms
• Enrich understanding by comparing/contrasting previous VA research
• Cardiovascular Disease Risks
• Musculoskeletal
• Mental Health
• Maternal/reproductive health
